Abstract. List of type material of the Palaearctic and Oriental *Agrilus* Curtis, 1825 species in the collection of René Oberthür, Muséum national d'Histoire naturelle, Paris is provided. Lectotypes from Deyrolle, Eschscholtz, Fairmaire, Gebler, Gory, Gory et Laporte and Marseul type material are designated.

Lectotype designation, Coleoptera, Buprestidae, *Agrilus*, Palaearctic region, Oriental region

INTRODUCTION

During a study of the type material of the genus *Agrilus* Curtis, 1825 in Muséum national d'Histoire naturelle in Paris I also took an opportunity to examine material in the collection of René Oberthür. This collection comprises besides complete type material of all Oriental *Agrilus* species described by Deyrolle, moreover several Oriental and Palaearctic types of Eschscholtz, Fairmaire, Gebler, Gory, Gory et Laporte and Marseul as well. The state of collection however, disallowed any handling with material. A major part of material was unlabelled except for a separate label, attached on the bottom of the box on the left side of a specimen or specimens. Into the collection have been added successively and inconsistently further specimens until the boxes were fully stuffed. Handling the material was complicated by corroded pins firmly fixed in the bottom of the box. Serious examination of the type material was impossible in the given conditions. Due to the kindness of J.-J. Menier I was allowed to perform several modifications in the Palaearctic and Oriental part of the genus *Agrilus* of the Oberthür's collection.

MATERIAL AND METHODS

All specimens originally stored in two boxes were placed into new boxes and provided with yellow printed labels "MUSÉUM PARIS 1952 COLL. R. OBERTHÜR". The successively included, non-type material was placed in a separate box. The original material was replaced along with corresponding labels and ordered as in the original boxes. The data from corresponding labels attached originally on the bottom of the box were rewritten by hand with black ink on the pre-printed label with the inscription "TRANSCRIPTIO" in black border and attached to each specimen. The type material was finally labelled with red printed labels as follows: "LECTOTYPE" or "PARALECTOTYPE" or "HOLOTYPE by monotypy", followed with unabbreviated species name (in original combination and original spelling), author or authors name, year of the publication and inscription "E. Jendek design. 1997".

Present paper represents list of type material of the Palaearctic and Oriental *Agrilus* species stored in the Oberthür's collection. The list includes formal designation of lectotypes and number of paralectotypes (if exist). The first line gives the available correctly spelled species name in recent generic combination, despite it is valid or not, followed by author and year of publication. Synonymy of a single species is not given as exceed scope of this

work. The second line gives the name in original spelling and original combination with its author, year of publication and pages. The rest of the data cover information accompanying type material, eventually author's remarks or comments.

The following abbreviations and marks are used: quotation “ ”, mean data from literature are listed; square brackets [] are used for author's remarks and complementation; backslash \ is used to separate data from different labels, [p] preceding data printed; [h] preceding data hand-written.

Gory et Laporte (1837) in their work missidentified *Buprestis graminis* Panzer, 1799 with a new species and they simultaneously used first time the combination of the specific epitheton *graminis* with the generic name *Agrilus*. *Buprestis graminis* Panzer refers recently to *Meliboeus graminis* (Panzer) and has nothing in common with *Agrilus graminis* Panzer sensu Gory et Laporte. According to the rules of ICZN (1985), Article 49 such a name must be replaced. Nevertheless *Agrilus graminis* Panzer sensu Gory et Laporte represents good, generally accepted and common species, with authorship given to Gory et Laporte, therefore this nomenclatorial problem should be solved by the Commission.
